

Update on IANA

Seoul, Republic of Korea
October 2009

Kim Davies
Manager, Root Zone Services

Internet Corporation for
Assigned Names & Numbers

Documenting Processes

Documenting IANA processes

- ▶ Technical Requirements document published
- ▶ Root zone procedure documentation almost finished, aim to publish in time for new IDN ccTLD process
- ▶ Working on improving delegation requirements documentation for consideration by the ccNSO Delegation Working Group

Workflow Automation

Workflow automation

- ▶ Final “parallel testing” phase commenced week of ICANN Sydney
- ▶ Flaw was identified affecting minority of change requests, but had serious consequences.
- ▶ Fundamental issue where EPP-model doesn't map well to RZM-model.

Workflow automation

- ▶ EPP assumes atomic changes that are performed serially.
 - ▶ Root Zone process mandates parallel changes which are interdependent.
- ▶ None of this is customer visible — all relates to how the IANA/VeriSign/NTIA interactions occur.
- ▶ Problem is being remedied through both code changes, and modifications to the RZM authorisation process
- ▶ During retooling, also implementing specific new workflow feature, as well as the DNSSEC infrastructure for...

Signing the root zone

Private Testing

Public Testing

Full Production

**Dec 1
2009**

**Jul 1
2010**

Now

Signing the root zone

- ▶ Key handling interactions will be modeled on current root zone management process
 - ▶ Template-based change request form submitted to IANA
 - ▶ Therefore, somewhat deviated from ITAR practice
 - ▶ Transition to web-based interactions with launch of root zone automation platform
 - ▶ Provide template completion tool until then

Interim Trust Anchor Repository

Interim trust anchor repository

- ▶ Continues to run
- ▶ Gaining operational experience from how TLD operators use it
 - ▶ TLD anchors expiring without providing their replacements
 - ▶ TLDs not using the KSK/ZSK model
 - ▶ TLDs continuing to use their anchor after effectivity period
 - ▶ TLDs who repeatedly enter wrong data

IDN ccTLDs

YES

NO

Phase 1

can we use "ελ" to represent "Greece"?

Phase 2

can ".ελ" be delegated to (*organisation*) and be inserted in the root zone?

evaluation performed by new ICANN team w/ outside experts

new eligibility criteria, new process (web form)

minimum 2 weeks

evaluation performed by IANA staff w/ ICANN Board approval

standard delegation criteria, standard root zone process, plus Phase 1 completion

estimate 3+ months

IANA preparation

- ▶ Improving documentation (both internal and external)
- ▶ Hired a new root zone management staff member
- ▶ Additional ICANN staff resources that can switch to this project as needed

Thanks!
